

Founded in 1955, the American Academy of Environmental Engineers® (AAEE) is dedicated to improving the practice, elevating the standards, and advancing the cause of environmental engineering. The mission is accomplished by recognizing expert, professional environmental engineers; fostering sound environmental engineering education; recognizing quality in environmental engineering and practice; and sharing the Academy's collective expertise with the public and profession.

**Why Use
AAEE
Board-Certified
Environmental
Engineers
?**

WHY USE A BOARD-CERTIFIED ENVIRONMENTAL ENGINEER?

Choosing a qualified Environmental Engineer as an employee or a consultant is always a challenge for those who make the hiring decisions.

You have a right to be concerned about the competence of the person entrusted with complex engineering projects and programs affecting the health and safety of the public and the environment.

How do you decide on the right professional? Choose a **Board Certified Environmental Engineer** (BCEE), **Diplomate Environmental Engineer** (DEE), or a **Board Certified Environmental Engineering Member** (BCEEM).

WOULD YOU CHOOSE YOUR GENERAL PRACTITIONER TO PERFORM YOUR HEART SURGERY?

Of course not. Heart surgery requires a skilled, board certified cardiologist.

Environmental Engineering is no different. Your critical projects require the verified expertise of an AAEE Board Certified Environmental Engineer. AAEE certifies the expertise of Environmental Engineers in the following specialties:

- ◆ Air Pollution Control
- ◆ Environmental Sustainability
- ◆ General Environmental Engineering
- ◆ Hazardous Waste Management
- ◆ Industrial Hygiene
- ◆ Radiation Protection
- ◆ Solid Waste Management
- ◆ Water Supply/Wastewater Engineering

When it comes to Environmental Engineering, nothing matters more than choosing the right experienced professional to handle the job. For more than 54 years, there has been a superior way of finding those professionals: choosing those who have earned the title, **Board Certified Environmental Engineer** or **Diplomate Environmental Engineer** (BCEE or DEE)* (for P.E. holders) and **Board Certified Environmental Engineering Member** or BCEEM (non P.E. holders).

** BCEE and DEE are equal and the same.*

THE MARK OF PROFESSIONALISM

Accredited certification gives independent testimony to the professional environmental engineer's specialty expertise.

The **BCEE**, **DEE**, and **BCEEM** titles are internationally recognized certifications granted by the American Academy of Environmental Engineers®. It's the only certification program for professional Environmental Engineering specialists with these proven qualifications:

- ◆ A bachelors or advanced college degree in engineering or a related field
- ◆ A minimum of 8 years of full-time professional experience
- ◆ A minimum of 4 years of responsible management
- ◆ A Professional Engineer's License in one or more states (for **BCEE** or **DEE**)
- ◆ Successful completion of written and oral examinations
- ◆ Continuing practice and professional education requirements, including auditing of compliance with Professional Development Hour requirements.

The **BCEE**, **DEE**, and **BCEEM** are recognized by other professionals and government agencies as the hallmark of premier environmental engineers. The Academy's certification program is accredited by the Council of Engineering & Scientific Specialty Boards.
